Dear Charles:

When I learned about a process... fused into the paint, I questioned it with concerns on application, gloss retention, re-coatability, etc. After hours of research with Charles and most importantly, testing it on my own, I have found PPS to be everything it states. It is truly a remarkable molecular fusion system that bonds directly into the painted surface with outstanding results in appearance and longevity.

Sincerely,

Jon Ovnich

1st Endorsement

Dear Charles,

I totally agree with Jon Ovnich. I would like to recommend you on several very fine jobs detailing cars for us. Our 1994 Chevrolet Impala SS gets shiner by the day and the 1987 Rolls-Royce Silver Spur has never looked better! And that is some statement in itself.

We are quite pleased with the performance of the Polarized Protection system. It does seem to be an excellent product.

Thank you for introducing PPS to us and for doing such an exemplary job with the application and your super detailing service.

Sincerely,

Woody Richey
